SUMMARY	Java Developer with 4+ years of experience building enterprise backend applications. Skilled in Java, Spring Boot, microservices, REST APIs, Kafka, Kubernetes, Docker, and AWS. Worked on healthcare and telecom applications involving backend development, cloud migration, production deployments, security fixes, and high-volume file processing.	
EDUCATION	Bachelor of Engineering (Computer Science) Medi-Caps University, Indore, Madhya Pradesh	Completed, May 2022
	Intermediate Annie Besant School, Indore, Madhya Pradesh	Completed, April 2018
	High School New Digamber Public School, CBSE, Madhya Pradesh	Completed, April 2016
WORK EXPERIENCE	Tata Consultancy Services (Systems Engineer) Indore, Madhya Pradesh Java Developer working across healthcare and telecom domains, developing and enhancing Spring Boot-based backend services and microservices. Clients: UnitedHealth Group (Optum) & Verizon Wireless	June 2022 – Present
PROJECTS	Project: United Health Group (Optum) Period: August 2024 – Present Role: Java Developer Responsibilities: ◦ Spearheaded a Spring Boot claims-processing platform integrating 6+ microservices for file ingestion, validation, tracking, downstream integrations, and healthcare workflows. ◦ Engineered the end-to-end claims-processing pipeline using AWS S3 ingestion, MySQL tracking and retriggering, validation, decoding, Map Team REST integration, and Claims Highway processing. ◦ Designed and optimized REST APIs supporting 50–70K files daily, processing typical 500–700 MB files and workloads up to 5 GB through efficient input, string, and ASCII validation. ◦ Led the migration of high-volume file storage from Kubernetes PVC/NAS to AWS S3, keeping storage utilization below 20% of the 120 GB allocation during traffic bursts. ◦ Increased batch throughput from approximately 7K records per day to 5K per hour by scaling pods from 1 to 2 and implementing two-thread parallel processing of five records at a time. ◦ Owned production deployments, PR reviews, release coordination, Kubernetes configuration, security remediation, and troubleshooting, reducing cloud vulnerabilities from 150 to 0 and secure-code vulnerabilities from 500 to 50. Retail Attachments / Unified Portal Feature Period: November 2025 – Present Role: Java Developer ◦ Owned the real-time application workstream for a retail attachment feature within a unified cross-team portal, coordinating technical delivery for the EDI-B2B Attachments (Team 275) application. ◦ Built a Java/Spring Boot REST API, integrated it with Stargate, configured Superconnector as the consumer, and implemented OAuth-based application access. ◦ Reduced first-request latency for HCP Multi-Cloud retail APIs, which initially exceeded 12 seconds after deployment, by triggering a startup dummy transaction to pre-initialize S3 and downstream authentication dependencies. ◦ Implemented backend failure-retry mechanisms for failed attachment transactions, enabling automatic recovery and reprocessing of transient downstream failures without manual intervention. ◦ Segregated the unsolicited retail workflow from existing real-time unsolicited and solicited workflows, enabling independent end-to-end processing while preserving existing workflow functionality.	

Verizon Wireless

Period: June 2022 – July 2024

Role: Java Developer

- Developed and enhanced backend services using Java, Spring Boot, and REST APIs, designing new endpoints and optimizing existing services to improve application reliability and performance.
- Optimized microservice implementations and REST API processing to improve response times and throughput across enterprise applications.
- Identified and remediated vulnerabilities reported by SonarQube, Fortify, and Black Duck, improving code quality and strengthening application security and compliance.
- Contributed to microservice architecture and REST API design, applying enterprise development practices through code reviews, design discussions, and collaborative implementation.
- Contributed across the Software Development Life Cycle (SDLC), including Agile/Scrum ceremonies, sprint planning, development, testing, code reviews, and production releases.

CERTIFICATIONS	Claude Certified Developer – Foundations (CCDV-F)	September 2026
	AWS Certified Developer – Associate (DVA-C02)	August 2026
	GitHub Copilot	June 2025
	MongoDB SI Associate	August 2024
	Microsoft Azure Fundamentals (AZ-900)	March 2022
	Java Programming: Solving Problems with Software	Coursera, 2021
	Java Certification	DotPoint Institute, 2019

AWARDS & ACHIEVEMENTS	Cleared NDA-141 Examination and appeared for SSB-Allahabad	2018
	TCS Star of the Month Award	
	TCS On-the-Spot Award	
	Capgemini Tech Challenge	2021

SKILLS	Languages	Java 8, 17, 21, JavaScript
	Frameworks	Spring Boot, Spring Data JPA, JUnit 5
	Cloud	AWS, AWS S3, GCP, HCP Multi-Cloud, Microsoft Azure
	Microservices	Microservices Architecture, REST APIs, Kafka, OAuth, Stargate
	API	Swagger, OpenAPI, Postman, Insomnia
	Containers	Docker, Kubernetes, Helm, NGINX
	Security	CodeQL, Prisma Defender, SonarQube, Fortify, Black Duck
	Databases	MySQL, MongoDB
	Development Tools	Eclipse, STS, VS Code, IntelliJ IDEA
	Other Tools	GitHub, Splunk HEC, Jenkins, Rally, OpenLens, S3 Browser, CloudBerry Explorer, Grafana
	Methodology	Software Development Life Cycle (SDLC), Agile, Scrum
	Web	Apache Tomcat, HTML, CSS

INTERESTS	Watching cricket and wrestling
	Listening to music
	Playing console games

LANGUAGES	English, Hindi
